Crypto asset trading involves a high degree of risk. Crypto assets may experience frequent price volatility due to (i) the small use of Crypto assets in the retail and commercial marketplace in comparison to relatively large use by speculators and (ii) the lack of assurance that a person or institution who accepts Crypto assets as payment today will continue to do so in the future. Such price volatility may adversely affect an investment in Crypto assets so prior to using our services, please evaluate the merits and risks of the investment and be able to bear the economic risk of losing your entire investment in a short period of time.
